- (1) Let V be a finite dimensional vector space over a field K . Choose a basis β of V and define the map:

$$Tr : Hom_K(V, V) \rightarrow K, \quad Tr(T) = Trace([T]_\beta)$$

where $[T]_\beta \in M_n(K)$ is the matrix associated to T with respect to the basis β .

- (a) Show that $Tr(AB) = Tr(BA)$.
(b) Prove that the definition of Tr is independent on the choice of the basis and that Tr is a K -linear transformation. Is it a ring-homomorphism?
(2) Let L be a field and $K \hookrightarrow L$ be a subfield such that L is a finite dimensional vector space over K . For every $e \in L$ denote by the same symbol the multiplication map

$$e : L \rightarrow L, \quad e(x) = ex.$$

It is a K -linear transformation.

- (a) Show that $B : L \times L \rightarrow K$, defined as $B(e_1, e_2) = Tr(e_1 e_2)$ is a bilinear form.
(b) Write the form explicitly for $\mathbb{R} \hookrightarrow \mathbb{C}$.
(c) Prove that if $\text{char}(K) \neq 0$ then B is non-degenerate.
